

# the azbiChair

You're working at the computer.

You are working, programming, texting, retrieving information, teleconferencing or watching a movie, ... whichever, your working style is not paper dominant?

You are very energetic and focussed, but sometimes you let your thoughts wander, and in either situation you want your computer screen in an ideal distance?

Then

Take a leap into a brand new concept:

The azbiChair holds your screen at the right distance, even when you...

...lean way back.

The azbiChair is balanced. With virtually no effort you change your position from upright to reclining, and yet always having the screen in focus.

When laying back your spine can relax from the strains of being upright. You won't tire so much and can even feel refreshed after a working day.

Discreet lighting for your keyboard or your notes means you can work independently of daylight levels.

The head rest is adjustable no need for screws or hooks.

The table top can be pulled out to a comfortable position. Below you can store sticky notes, pens, and other accessories you might find helpful.

Color, form and some other aspects are adaptable. For further details please contact us on [www.azbi.ch](http://www.azbi.ch).

# the azbíChair

This is an integral furniture item, primarily for working on screen. It has been designed to fit into a modern home as well as a gallery or office environment. Due to its compactness the space it uses won't vary like normal chair-table combinations. The wooden structure gives it a warm and cosy appearance, and with its selectable color scheme it harmonizes nicely with your personal style.

## Looks

Several types are available.

## Basics

### Measurement
